Applicant presents four claims with only broad concepts being claimed; for example, the way of holding the straw in the strawholding arm, the mechanism to lock the release arm against the inner rim of the lid, the spring supplying the power to secure and turn the mechanism. The structural elements of the straw delivery mechanism should be discussed in the claims. For example:

A drinking straw automatic delivery device attached to a top end closure of a beverage can comprising: a straw and a straw delivery mechanism;

the straw delivery mechanism including a straw support, a release mechanism, a connecting rivet and a spring;

the straw support including an elongated arm, the elongated arm having generally planar top and bottom surfaces, two side edges, a free end and an opposite end connected to the release mechanism and the spring, a serrated opening for a straw located in close proximity to the free end, the serrated edge of the straw opening extending above the planar top surface and allows only upward movement of the straw within the straw opening;

the release mechanism including an elongated release arm having generally planar top and bottom surfaces, two side edges, a free end and an opposite end connected to the straw support and spring;

the straw support and the release mechanism being rotated with respect to the top end closure of a beverage can about the connecting rivet which secures the straw delivery mechanism to the top end closure, the straw delivery mechanism having a locked position wherein the straw is not aligned with the frangible area of the top end closure and the free end of the release arm

Art Unit: 3781

engages an inner rim of the top end closure preventing spring-biased, rotating movement of the release arm and straw support;

with a frangible, downwardly bent tongue portion of the top end closure upon opening of the top end closure frangible area by downward bending motion, the free end of the release arm moves along the beverage can sidewall as spring-biased, rotating motion moves the straw delivery mechanism from the locked position to an unlocked, straw delivery position wherein the straw and the straw opening are positioned in alignment with the opening in the top end closure that was previously covered by the frangible area of the top end closure.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3 and 4 are rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a manner as to present a complete operative device. The claim(s) must be in one sentence form only. Note the format of the claims in the patent(s) cited.

Claim 3 recites "the mechanism to lock the release arm ..." wherein claim 1 refers to an opening mechanism (pull tab 14) that is different than the release arm 9. This causes an antecedence problem with claim 3 which makes claim 3 indefinite.

Art Unit: 3781

Claim 4 states that the spring supplies power to secure and turn the mechanism named in claim 1. Applicant has meant to state that the spring secures and turns the device for delivery of a drinking straw rather than the opening mechanism (pull tab 14) of claim 1. This causes an antecedence problem with claim 4 which makes claim 4 indefinite.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Prieto (6491184).

Prieto discloses a device for automatic delivery of a drinking straw (see Fig. 3a-3d) from the inside of a metal beverage container having an opening mechanism with a bend-down-tongue (7). Re claim 2, the straw (2) is held in straw holding arm (4). Re claim 3, the release arm (secondary locking arm 8) is locked against the inner rim of the lid (intermediate piece 9) at the articulated hinge end (14) which is connected to intermediate piece 9. Re claim 4, the spring is the elasticity of straw holding arm 4 which biases the arm 4 toward its free position A shown in Fig. 3d and as recited in col. 6, lines 30-31.
